

Creating or modifying a custom extension to exploit an existing CAST analyzer with the CAST AIP Extension SDK

i **Summary:** This section explains how to create or modify a custom extension to exploit an existing CAST analyzer with the **CAST AIP Extension SDK** such as the analyzers for:

- .NET
- SAP/ABAP
- J2EE
- Universal Analyzer

The documentation is contained in an external site. Please see <http://cast-projects.github.io/Extension-SDK/doc/index.html> for more information:

The screenshot shows the documentation page for the CAST Extension SDK. The page has a dark blue header with the title "CAST Extension SDK" and version "1.0". Below the header is a search bar labeled "Search docs". The left sidebar contains a navigation menu with the following items: Overview, Installation, Tutorial : My first plugin, Deploying plugins, Creating a plugin, Running during analysis of an existing analyser, Running code after analyzers, Exchanging data between analysis level and application level, Analysers specific events, Debugging, API Reference, Features and Bugs per CAIP versions, and Tips and tricks. The main content area is titled "CAST Extension SDK's documentation" and includes a "View page source" link. The content starts with the text "CAST Extension SDK is a tool to write extensions for CAIP." followed by a "First steps" section. Under "First steps", there are three sub-sections: "Overview" (New to developing plugins with CAST Extension SDK?), "Installation" (Instructions on how to install the Development environment.), and "Tutorial : My first plugin" (Instructions on how to create a first plugin.). Below this is a "Deploying plugins" section (Once plugins are developed they can be deployed in CAIP.) and a "References" section (Main reference).
