

Onboarding an Application in CAST AIP

This documentation is no longer maintained and may contain obsolete information. You should instead refer to [Application onboarding](#).

Summary

This "**Onboarding**" approach provides a step-by-step guide to onboarding a **new Application** with the CAST Application Intelligence Platform (AIP), starting with the **initial source code qualification phase** and working through:

- Source code delivery and acceptance
- Analysis configuration and execution
- Measuring the application

For Onboarding a new application, CAST recommends appointing at least one person who can assume the role of CAST AI administrator.

There are a number of roles described in this documentation. These roles do not have to be physically separate roles within a team, but the roles are linked to CAST AIP functionality and activities.

Workflow

- **Qualification**
