

# Check the installation of your component

Once you have [Created a new custom component](#) you then need to check that they have been installed correctly:

- Components that have been installed on a CAST database are registered in the table **SYS\_PACKAGE\_VERSION**.
- If correctly installed you should see the following rows in the table:

```
PACKAGE_NAME  VERSION
[ char ]      [ char ]
-----
LOCAL_CLIENT  1.0.0.1 (pck interface for User Component)
LOCALADDON    1.0.0.1 (your component)
```
