 - [Upgrade batch file](#)
- [CAST Storage Service maintenance tools](#)

Summary: CAST AIP 8.3.10 introduces a number of features and changes as listed below.

Technology support changes

Please also see [Technology coverage changes in CAST AIP 8.3.x](#) for more detailed discussion of this subject.

Upgrade

Upgrade batch file

A new parameter (**PSQL_PATH**) has been added to the **CASTUpgrade_Config.txt** file. This optional parameter is used to define the locations of the **psql.exe** binary that is used to perform the upgrade. See [Automating the CAST AIP Upgrade process](#).

CAST Storage Service maintenance tools

A new parameter **-psqlerdir** has been added for the following tools:

- **CSSBackup.exe**
- **CSSBackupAll.exe**
- **CSSRestore.exe**
- **CSSRestoreAll.exe**

This allows the definition of an alternative location (for example, outside the CAST AIP installation folder) for the PostgreSQL binaries used for this tool:

- **pg_dump.exe**
- **psql.exe**
- **pg_restore.exe**

See [CAST Storage Service - Maintenance activities](#).
