  - [Consolidation using GUI/CLI tools](#)
    - [Unlock option](#)

**Summary:** CAST AIP 8.3.7 introduces a number of features and changes as listed below.

## Technology support changes

Please see [Technology coverage changes in CAST AIP 8.3.x](#) for more detailed discussion of this subject.

## Installation and deployment

### Storage hosts

CAST AIP schemas can now be installed from scratch on **PostgreSQL 10.5** where hosted on a Linux Operating System. See [Supported Platforms](#) for more information.

## CAST Management Studio

### Application editor > Execution tab

The Reports and Logs section now includes a column called "Version" which indicates release of CAST AIP was used to generate the report. If this column is empty when a report is present, this means that the report existed prior to the upgrade to CAST AIP 8.3.7. This column will be filled when a new snapshot is generated (for example the post upgrade consistency snapshot).

## Health Dashboard

### Consolidation using GUI/CLI tools

#### Unlock option

If you have used **AadConsolidation-GUI.exe** to perform a synchronization, but this synchronization is aborted for whatever reason, then the Measurement Service schema will remain in a "locked" state and no further synchronization can take place. A new "**unlock**" option has been added to the GUI and CLI tools to allow the Measurement Service schema to be unlocked. See [HD - Using the GUI and CLI tools](#) for more information.
