

View custom Business Criteria in Engineering Dashboard

- [Introduction](#)
- [Required steps](#)

Summary: this page explains how to ensure that any custom Business Criteria (and contributing Technical Criteria/Rules) are visible in the Engineering Dashboard.

Introduction

If you have created **custom Business Criteria** with **custom contributing Technical Criteria** and **Rules**, you need to use the following steps to ensure that these items can be seen in the Engineering Dashboard. Take the following example created in the CAST Management Studio (at the current time it is not possible to create custom Business Criteria/Technical Criteria/Rules in [AIP Console](#)):

Click to enlarge

The screenshot shows the configuration page for a Business Criterion named 'TEST_BC'. The 'Name' field is set to 'TEST_BC'. The 'Active' checkbox is checked. The 'Detached' checkbox is unchecked, and the 'Attach' radio button is selected. Below this, there are tabs for 'Grade Contributors', 'Documentation', 'General', and 'Notes'. The 'General' tab is active, showing 'Technical Criteria contributing to the current Business Criterion.' A table lists the contributing technical criteria:

Weight	Critical	Technical Criterion
1	false	TEST_TC

Below the table, there are input fields for 'Weight' (set to 1) and 'Critical' (unchecked). The 'Technical Criterion' dropdown is set to 'CAST 8.3.20 Assessment Model / TEST_TC'.

Required steps

- **Generate a new snapshot** so that the custom Business Criteria is included in the results.
- Modify the `ed/ced.json` file in your deployed Engineering Dashboard and set `"filterHealthFactor": false`, - see [Engineering Dashboard json configuration options](#) for more information about this.
- **Restart** your Apache Tomcat server to ensure that the changes in `ed/ced.json` are applied.
- View results in the dashboard (remember to clear the browser cache):

The screenshot shows the Engineering Dashboard with two panels: 'Health Measures' and 'Technical Criteria'. A red arrow points from the 'TEST_BC' entry in the Health Measures table to the 'TEST_TC' entry in the Technical Criteria table.

HEALTH MEASURE	TECHNICAL CRITERION
+ 64 0 64 n/a TEST_BC	n/a n/a n/a n/a All Rules... n/a
+ 53 0 53 n/a Total Quality Index	+ 11 0 11 n/a TEST_TC 1
+ 52 0 52 n/a Programming Practices
