

# Siebel 5.0

This is the documentation for the CAST AIP extension **Siebel 5.0**. It also includes documentation for Service Pack releases (for example 5.0.1).

"Official" CAST AIP Extensions are provided by CAST and are installed on top of CAST AIP to provide support for specific technologies (analysis /measurement/discovery) that are not supported "out-of-the-box" by CAST AIP. These "official" extensions have their own product life-cycle for development, testing and shipping, which is independent from CAST AIP. Please also see [Extensions - an introduction](#) for more information.

This document is intended to serve as a "Cookbook" for the Siebel extension. The document is technically oriented and intended for an experienced CAST administrator. For the Siebel administrator responsible for the source code extraction, a dedicated page is included in this document. Furthermore, this document is an extension of the standard CAST AIP documentation, available online at <http://doc.castsoftware.com>.
