

CAST Architecture Checker - Exporting a Quality Rule Model as an extension

A **Quality Rule Model** is used to check that an Application adheres to a specific rule - see [Define a new Quality Rule Model](#) and [CAST Architecture Checker - creating an example Quality Rule Model from A to Z](#). In addition to this, Quality Rule Models **can be exported as CAST AIP extensions** and then installed and integrated with the CAST AIP Assessment Model **as a rule**. This page explains how to export the Quality Rule Model as an extension.

Note that one Quality Rule Model is equal to one "rule" in the CAST AIP Assessment Model.

See the following for instructions on specific situations:

- [CAST Architecture Checker - Exporting a Quality Rule Model to a new extension package](#)
- [CAST Architecture Checker - Exporting a new Quality Rule Model to an existing extension package](#)
- [CAST Architecture Checker - Removing a rule from an existing exported package](#)
