

Install CAST Extend Offline or Proxy - optional

CAST Extend Offline/Proxy is **only required** if (due to security concerns for example) your organization/AIP Console cannot interact over the public internet with CAST's Extend system for Extension management. CAST currently offers two separate but similar "offline" packages that can be installed:

CAST Extend local server	<ul style="list-style-type: none">• Installed on-premises.• Can be configured in offline or online mode:<ul style="list-style-type: none">• When in offline mode, functionality is the same as CAST Extend Offline and extensions must be added manually to CAST Extend Proxy.• When in online mode, CAST Extend Proxy is configured to connect with CAST's Extend system for Extension management over the public internet.• AIP Console connects directly to fetch required extensions.• Configured in AIP Console in the start-up wizard. <p>See Install CAST Extend local server.</p>
CAST Extend Offline	<ul style="list-style-type: none">• Installed on-premises.• Does not interact with CAST's Extend system for Extension management over the public internet.• Extensions must be added manually to CAST Extend Offline.• AIP Console connects directly to fetch required extensions.• Configured in AIP Console in the start-up wizard. <p>See Install CAST Extend Offline.</p>
