

Changing the default operator and guest passwords for CAST Storage Service

- [Introduction](#)
- [Using PgAdmin](#)
- [Using a SQL query](#)

Introduction

When a CAST Storage Service is installed, two additional users/roles are created (**operator/guest**) by default as listed below. An additional user (**postgres**) is already present out of the box:

User	Default password
operator	CastAIP
guest	WelcomeToAIP

If you would like to change the passwords for these users, there are various methods. CAST recommends either using **PgAdmin** (which is bundled with CAST Storage Service) or use a **SQL** query. Both are explained below.

 See [Action items after changing the operator user password when using AIP Console](#) for more information.

Using PgAdmin

Right click the operator/guest user and choose **Properties**. Then click the **Definition tab** and enter the new password in the **Password** field. Click **Save** to action the changes.

Login Role - guest ✕

General **Definition** Privileges Membership Parameters Security SQL

Password ← 1

Account expires YYYY-MM-DD HH:mm:ss Z 📅

Connection limit -1

i ? ✕ Cancel 🔄 Reset 💾 Save 2

Using a SQL query

Use the **ALTER USER** statement, where **username** is operator/guest and where **password** is the new password you would like to set:

```
ALTER USER username  
WITH PASSWORD 'password';
```
