

AIP Console - Application Management

- [Accessing Application Management](#)
- [Available options](#)

i Summary: this page describes Application Management section of AIP Console.

Accessing Application Management

Login and switch to the **AIP Console option** (all users can access Application Management):

Alternatively, you can browse to the following URL - modify the URL for your own environment:

```
http://<server>:<port>/ui/index.html#/
```

Available options

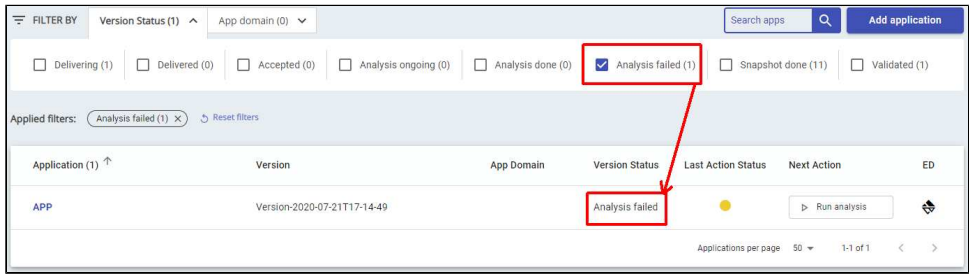

The **Application Management screen** lists all Applications that the current user has permission to interact with (see [Administration Center - Security - User Roles](#)):

Application (19) ⁴ ↑	Version ⁵	App Domain ⁶	Version Status ⁷	Last Action Status ⁸	Next Action ⁹	ED ¹⁰
Another app	Version-2020-07-27T17-29-31		Validated	●	Add version	🔒
APP	Version-2020-07-21T17-14-49		Analysis failed	●	Run analysis	🔒
CASTL	Version-2020-07-27T18-13-20		Snapshot done	●	Add version	🔒
CRM modernization	v3	DOM1	Snapshot done	●	Add version	🔒

1 **Filter options:**

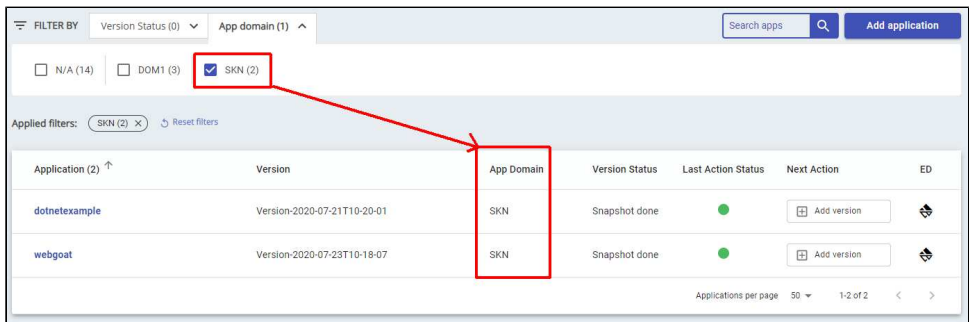

- **Version Status** - by default this tab is enabled and allow you to filter on the **Version Status** column. Ticking a sub-option, for example **Analysis failed**, will display only those items matching that status:

Click to enlarge

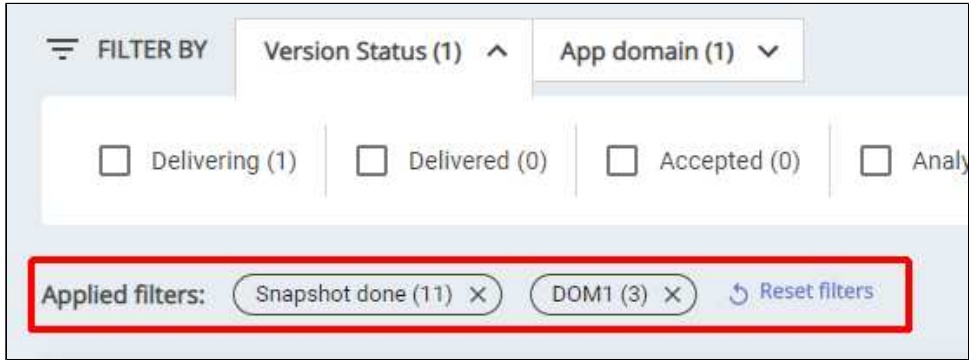

- **App domain** - by default this tab allows you to filter on the **App Domain** column, i.e. by domains that the Applications are attached to:

Click to enlarge

Filter selections are **cumulative**. You can delete individual filters or reset all filters at the same time using **Reset filters**:

2 Search for a specific Application in the list.

3 Add a new Application into AIP Console. See [Add a new Application](#).

4 **Name** of the Application. Click to go straight to the [Application - Overview](#) page.

5 **Version** name.

 Note that when a version is rejected, purged or deleted, the next most recent version will be displayed in this list. If no other latest versions exist (for example you deleted/rejected the initial version for the application) no version will be displayed for the application in this list.

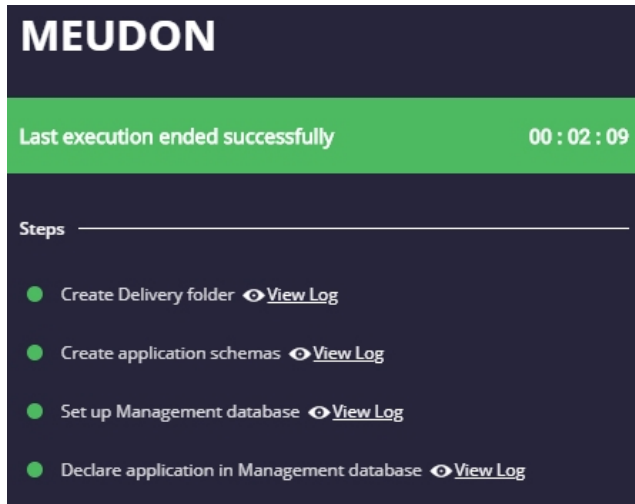

6 **Domain** that the Application belongs to, if any.

7 **Status** of the current version for the given Application.

8 **Status** of the most recent action performed for the given Application:

- **Green** = success
- **Yellow** = action stopped manually
- **Red** = action failed

Click to view the last action performed on the Application, for example:

9 **Next action** available for the Application.

10 Link to open either the **embedded Engineering Dashboard** or **CAST Imaging (if configured)**:

Embedded Engineering Dashboard	
CAST Imaging	

The icons will be displayed in the following situations:

Engineering Dashboard

- if the embedded Dashboards have been set up (see [Embedded CAST Dashboard deployment process](#))
- AND if there is at least one version created for an Application - however, this can mean that there may not be snapshots available, therefore clicking the icon will lead to an error when opening the embedded Engineering Dashboard.

CAST Imaging

- if the CAST Imaging instance has been configured in AIP Console (see [Administration Center - Settings - Imaging Settings](#))
