

# Common security configuration options for web application deployment

## In this section:

- [Configuring the use of secure https protocol with Tomcat for the CAST web applications](#)
- [Setting up a Reverse Proxy on Apache web server](#)
- [Disabling insecure HTTP methods in Apache Tomcat - webdav](#)
- [Disabling weak SSL cipher suites to improve security](#)

**Summary:** This section details advanced security configuration options that are common to all or some of CAST's web applications:

- CAST Application Analytics Dashboard
- CAST Application Engineering Dashboard
- CAST AIC Portal
- CAST Engineering Dashboard / CAST Discovery Portal
