

Standard rescan

Target audience - AIP Operator

A standard rescan allows you to get **analysis results quickly** using the **same settings** as those used for the previous version. This process allows **impacts on analysis results to be minimized** and limited only to any **new code** that has been added or **existing code that has been changed**.

To access AIP Console, use the following URL (ensure you specify the correct **server** and **port number**): `http://<server>:8081/ui/index.html`. The steps required are as follows:

Step 1	Ensure prerequisites are complete
Step 2	Standard rescan - add a new Version - deliver code - generate snapshot
Step 3	Standard rescan - check results
