

Standard onboarding

 Target audience - AIP Operator

A **standard onboarding** allows you to get **analysis results quickly** using the **default settings** provided in AIP Console. Results should be treated as an initial "**baseline**" and that settings may need "tweaking" and a subsequent analysis/snapshot run. To access AIP Console, use the following URL (ensure you specify the correct **server** and **port number**): `http://<server>:8081/ui/index.html`. The steps required are as follows:

Step 1	Ensure prerequisites are complete - including adding a new Application
Step 2	Standard onboarding - add a new Version - deliver code - generate snapshot
Step 3	Standard onboarding - check results
