

Education - change Share and Promote email text

- [Introduction](#)
- [Change this text](#)

Summary: This page explains how to change the text that is placed in a new email when using the "Share and Promote" feature in the [Education on tab](#).

Introduction

When using the "Share and Promote" feature in the [Education tab](#), a new email with pre-filled text will be created in the default email client on the local machine (as shown below):

<input type="checkbox"/>	RULE	TAG	COMMENT	ACTION	LAST UPDATE	
<input type="checkbox"/>	Avoid Fields in Servlet Classes that are not final static	Extreme	test	Mark for action	03-12-2019	
<input type="checkbox"/>	Avoid Procedures using an Insert, Update, Delete, Create Table or Select without including error management	Moderate		Mark for continuous improvement	01-15-2019	
<input type="checkbox"/>	Avoid Tables without Primary Key	Moderate	TEST	Mark for action	01-25-2019	

Hi,

In order to communicate around good practices based on CAST rule Education feature, I am pleased to share with you Documentation and sample of violations regarding the "Avoid Tables without Primary Key" Rule on your Application.

We would like to inform you that all new violations will be automatically added to the action plan for the next scan done with CAST.

Do not hesitate to come back to me if you have any question.

Documentation Section
You can directly access it to: http://ceiriad:8080/CAST-AED1534/engineering/index.html#AED/applications/3/snapshots/5/qualityInvestigation/0/60017/all/1101022/0/_edu

List of Violations
You can directly access it to: <http://ceiriad:8080/CAST-AED1534/engineering/index.html#AED/applications/3/snapshots/5/qualityInvestigation/0/60017/all/1101022/0>

Regards,

Change this text

To change the text that is displayed in the new email, first locate and open the following file in a text editor:

```
WAR 1.x
CATALINA_HOME\webapps\CAST-Engineering\engineering\Resources\urls.json

WAR 2.x
CATALINA_HOME\webapps\CAST-Engineering\static\engineering\Resources\urls.json

ZIP 2.x - The file is located in a compiled JAR file located at the root of the unpacked ZIP. This JAR file
will need to be unpacked to find the .json file and then repacked:
<unpacked_jar>\BOOT-INF\classes\static\engineering\Resources\urls.json
```

Locate the following sections in the file:

```
{
  "id": "share-rule-details",
  "url": "mailto:",
  "params": {
    "subject": "CAST Education: $ruleName",
    "body": "Hi,\n\nIn order to communicate around good practices based on CAST rule Education feature, I am
pleased to share with you Documentation and sample of violations regarding the $ruleName Rule on your
Application. \n\nWe would like to inform you that all new violations will be automatically added to the action
plan for the next scan done with CAST.\n\nDo not hesitate to come back to me if you have any question.\n\n
Documentation Section \n You can directly access it to: $ruleDocumentationUrl \n\n List of Violations \n You
can directly access it to: $violationsUrl \n\n Regards,\n"
  }
}
```

Now edit the "message" you want to change and add in your own message. Following any changes you make, **save the urls.json file** and then **restart** your application server so that the changes are taken into account.

Do not modify any text that uses a special variable, for example **\$ruleName**.
