

How do I extract and deliver a Mainframe application source code

Additional DMT Configuration Instructions

Source Code Location	Extractor Option	Specific Instructions
Mainframe	IBM zOS PDS dump extractor (Non IBM zOS PDS dump extractor - Use Files on your file system option. See How do I deliver source code when not stored in a supported SCM)	Library file path (PDS dump) location must point to the sub-folder you create in your application's code drop named folder on the drop site server. One sub-folder must be created for each DMT package.
