

Prerequisites

Learn about the prerequisites for deploying **CAST AIP**. This includes understanding the various components and packages, how to size your required hardware, the prerequisites for an installation and how to get the installation media.

Deployment considerations

To deploy **CAST AIP**, it is important to understand and consider the following:

- **Packages/components** available and required
 - Typical **architecture** scenario
 - Which **deployment architecture** should you use?
 - **Type of Applications** being onboarded
 - What about when **transitioning** from legacy CAST AIP?
-

Hardware sizing

Understand the hardware that is required to deploy CAST AIP:

- **On-premises** deployment
 - **Cloud** based deployment
-

Deployment requirements

What do you actually need to have in place before you can start the installation process?

- **AIP Console** (front end) package requirements
 - **AIP Node** (back end) package requirements, including AIP Core analysis engine
 - **CAST RESTAPI** requirements
 - Offline **CAST Extend** server (optional) requirements
 - Requirements for **end users** accessing the AIP Console
-
