

# Infrastructure sizing guide

The sizing information that we provide contains **guidelines** to help you plan and configure your deployments of CAST AIP and related applications. This information is based on testing performed by CAST and feedback from CAST customers.

Due to the different factors that need to be considered, it is difficult to make precise hardware/sizing recommendations, therefore what we provide is **indicative** only. We provide these figures as a guide to the **absolute minimum** required and your own deployment will **likely require better hardware**.

The factors that make recommendations difficult include:

- the equipment/hardware you use
- the features and functionality that you implement
- the size/type of Applications you intend to analyze with CAST AIP

Choose the CAST AIP product/component you want to size from those listed below:

	<b>CAST AIP for Dashboards</b>
	<b>CAST Imaging</b>
	<b>CAST Storage Service - PostgreSQL</b>

Other technical information about requirements, sizing etc. can be found in:

- [Java SE 8, Java SE 11 and OpenJDK support for CAST AIP](#)
- [Open source software shipped with CAST AIP and CAST Imaging](#)
- [Supported character sets for all AIP products and tools](#)
- [Supported Security Standards](#)
