

CAST Extend API

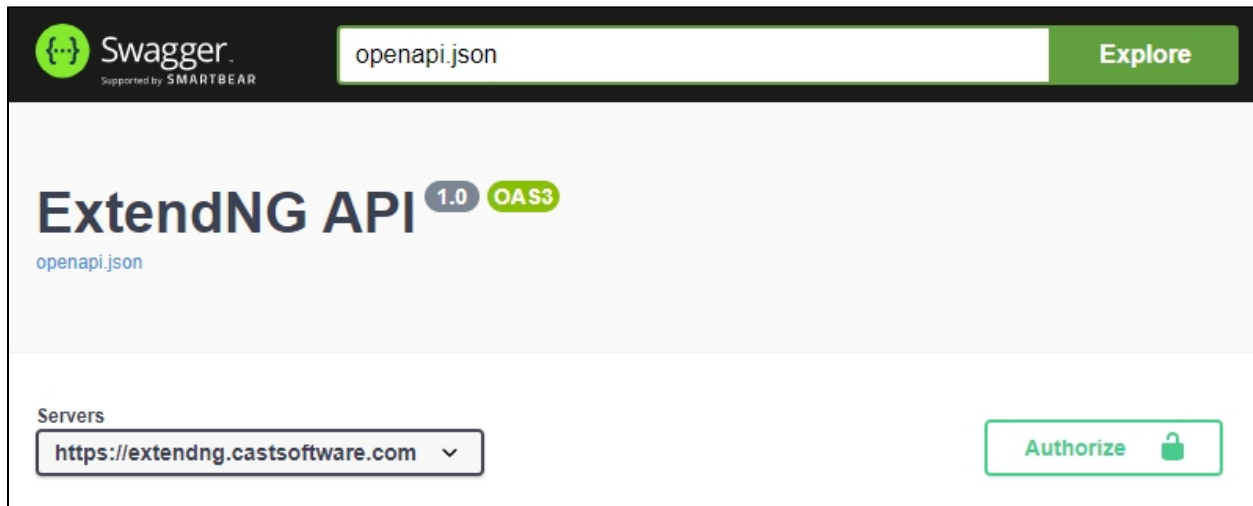

- [Introduction](#)
- [Using the API interactively](#)
- [Authorization](#)

Introduction

CAST Extend has a built in API that can be accessed in a manner of ways. API documentation exists and is provided by Swagger. This documentation is interactive and you can test requests directly. The API documentation is accessible via the following URL:

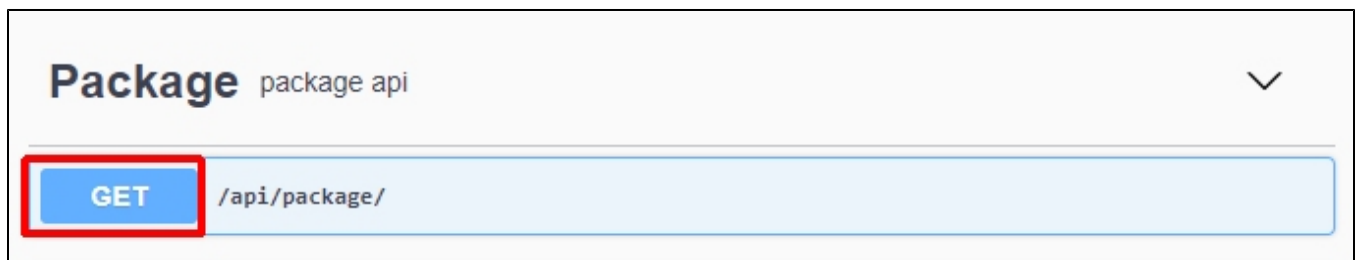

```
https://extend.castsoftware.com/api/doc
```

Click to enlarge

Using the API interactively

Expand the specific request using the blue section in the top left:

Click **Try it out**:

Package package api ⌵

GET /api/package/

Search api ordering results by title

Parameters Try it out

Click **Execute**:

Package package api >

User ⌵

GET /api/user/publications 🔒

get package to which the user is a contributor

Parameters Cancel

No parameters

Execute

Authorization

Some actions require authorization - these are marked with a padlock. Click the padlock to choose an authorization method and enter credentials/API key:

GET /api/package/download/{id}/{version} 🔒

download a specific package version

Parameters Try it out

You can obtain an **API key** when logged into CAST Extend in your [user profile](#).
