

Initial configuration steps for your CAST Imaging instance

When you have successfully completed the installation, various configuration steps now need to be worked through in order to complete the deployment process:

Step 1	Configure authentication	<p>By default, a "local" authentication system is active (additional users must be created manually and groups are not supported). The default login credentials are as follows:</p> <ul style="list-style-type: none">• admin/admin (this user already has the ADMIN role)• cast/cast <p>You can also configure CAST Imaging to function with your organization's authentication service. The following are supported:</p> <ul style="list-style-type: none">• LDAP/S<ul style="list-style-type: none">• Basic Active Directory domain controllers• Other members of the Active Directory family such as ADAM / AD LDS• Non-Microsoft directories such as Apache, Oracle, Novell etc.• Microsoft Active Directory• SAML
Step 2	Configure a license key	<p>CAST Imaging requires a license key - this key restricts access based on:</p> <ul style="list-style-type: none">• The number of Applications that can be imported into CAST Imaging.• The expiry date
Step 3	First login and become super admin	<p>Grant the SUPERADMIN role to a specific user - this role grants permission to access all data, configuration settings and tenants.</p>
Step 4	Export/import Application data	<div data-bbox="423 911 1484 1024" style="border: 1px solid #ccc; padding: 5px;"><p> When using AIP Console integrated with your CAST Imaging instance, there is no need to manually export and import your Application data - this process instead forms a step in the analysis process and is therefore automated.</p></div> <p>Before you can start to use CAST Imaging, you will need to:</p> <ul style="list-style-type: none">• export the Application data that will be displayed in CAST Imaging from a CAST Analysis Service schema• import the CSV format data (resulting from the export process) into CAST Imaging
Step 5	Configure user permissions	<p>There are two sets of access permissions that can be granted to a User or a Group of Users:</p> <ul style="list-style-type: none">• Ability to access the Admin Center• Access to Application data - permission must be granted before a user/group can view a specific Application data in CAST Imaging <div data-bbox="423 1325 1484 1404" style="border: 1px solid #ffc107; padding: 5px;"><p> This step can only be actioned when an application has been imported into your CAST Imaging instance.</p></div>
Step 6	Configure the source code viewer	<p>If you would like to make the source code of the objects in your Applications available to end users, this is possible.</p> <div data-bbox="423 1493 1484 1572" style="border: 1px solid #ffc107; padding: 5px;"><p> This step can only be actioned when an application has been imported into your CAST Imaging instance.</p></div>
