

CAST Oracle Forms Extractor - Options panel

 This section provides a detailed description of the contents of the **Options panel** in the [CAST Oracle Forms Extractor](#).

General	Options	Target
Configuration File Path	<input type="text"/>	
Extraction File Path	C:\Users\James\exportResults	

This panel enables you to define the various additional parameters for the extraction process:

Configuration File Path	<p>This field is used to specify a specific .config file that tells the extractor what to extract - it is only used if the default values need to be overwritten.</p> <p>CAST recommends leaving this parameter as defined.</p>		
Extraction File Path	<p>This command specifies the location you would like the extractor to output the Extraction action results to.</p> <p>By default:</p> <ul style="list-style-type: none">• the field will be pre-populated with %HOMEPATH%\exportResults - this means that the results of the extraction process will be stored in the %HOMEPATH% folder (this resolves to the current user's home directory).• the results are outputted in raw format in the selected folder - you can override this in the Expert panel by activating the Zip Packaging option. <p>If you want to store the results of the extraction process in a different place, enter a location manually or use the Browse button to locate a folder. The screen shot below will result in raw output files stored in located in the D:\Squirrel\results\exportResults folder:</p> <table border="1"><tr><td>Source File Path</td><td>D:\Squirrel\results\exportResults</td></tr></table>	Source File Path	D:\Squirrel\results\exportResults
Source File Path	D:\Squirrel\results\exportResults
