

Analysis Configuration and Execution

On this page:

- [Section summary](#)
- [Expected outputs](#)

Section summary

This section of the cookbook describes how to analyze and validate the source code of your Application and works through the three main steps:

- Initial configuration of the analysis in the CAST Management Studio
- Running and validating the analysis
- Performing an application consistency review

The steps listed below are the recommended steps and how to perform them

- [Initial analysis configuration](#)
 - [Confirm the Analysis configuration](#)
 - [Review Technology and Dependency settings](#)
 - [Enable XXL table Quality Rules](#)
- [Run and validate the analysis](#)
 - [Run the Analysis](#)
 - [Validate analysis based on log messages](#)
 - [Validate Dynamic Links](#)
- [Application consistency review](#)

Expected outputs

At the conclusion of this section, it would be expected that the Application source code will be:

- Analyzed
- Validated based on log messages
- Validated based on dynamic links

The next step is described in [Measure the Application](#).
