

Prepare and deliver the source code

This documentation is no longer maintained and may contain obsolete information. You should instead refer to [Application onboarding](#).

On this page:

- [Section summary](#)
- [Expected outputs](#)

Section summary

This section of the cookbook describes how to prepare and deliver the source code of your Application and works through the following main steps:

- Delivery of the source code using the CAST AIC Portal/CAST Delivery Manager Tool
- Validating and accepting the delivery

The steps listed below are the recommended steps and how to perform them

- [Technology specifics - extensions](#)
- [Delivery](#)
 - [How do I download and install the CAST Delivery Manager Tool](#)
 - [How do I create a new Version](#)
 - [How do I add a source code package to my delivery](#)
 - [How do I package the Version](#)
 - [How do I fine-tune my Version](#)
 - [How do I deliver the Version for analysis](#)
 - [How do I deliver a new Version of an application](#)
 - [How do I automate the delivery of future Versions of the application](#)
- [Delivery acceptance](#)
 - [Manage the Application](#)
 - [Validate and Accept the Delivery](#)

Expected outputs

At the conclusion of this section, it would be expected that the Application source code will be:

- Delivered via the CAST AIC Portal/CAST Delivery Manager Tool
- Validated and accepted in the CAST Management Studio

The next step is described in [Analysis Configuration and Execution](#).
