

# CAST-AAD-AED - Modifying login error messages

On this page:

- [Introduction](#)
- [Change these messages](#)

Target audience:

CAST AI Administrators

**Summary:** This page explains how to modify error messages displayed on login to the CAST Application Analytics and Engineering Dashboards.

## Introduction

It is possible to modify the messages displayed in red described below:

- When a user logs in and the user is not authorized to view any data in the dashboard (for example a new user with no role and no data authorization assigned to it) a message is displayed as follows and further use of the dashboard is prevented.

- When a user logs in and either the user name or password is incorrect, an error message is displayed:

## Change these messages

To change these messages, first locate and open the following file in a text editor:

```
AAD - %CATALINA_HOME%\webapps\CAST-AAD\portal\resources\urls.json
AED - %CATALINA_HOME%\webapps\CAST-AED\engineering\resources\urls.json
```

- Locate the following sections in the file:

```
{
  "id": "login-invalid-user",
  "message": "You are not authorized to access any applications"
},
{
  "id": "login-invalid-data",
  "message": "Sorry, username or password invalid"
}
```

- Now edit the "message" you want to change and add in your own message. For example, to modify the authorization message:

```
{
  "id": "login-invalid-user",
  "message": "You are not authorized to access any applications - please contact your administrator."
},
```

- Following any changes you make, **save the urls.json file** and then **restart** your application server so that the changes are taken into account.
