

CMS Snapshot Analysis - Run Analyzer - ReactJS - Error Free Logs - CAST AIP 83

Purpose

This page provides the description of the different logs which are created when generating an analysis with ReactJS. This analyzer is a subset of HTML5 analysis so will be included in that overall analysis with subsections specifically identified for this technology.

For more on ReactJS analyzer, see the documentation here: [ReactJS](#)

In this page, the different logs lines corresponding to the **Run Analyzer - ReactJS** are listed with functional and technical explanation of the logs that it generates. Here is a listing of the generated logs and sub-sections

- [CAST-MS-<date>-<time>.log.txt](#)
- [Analysis log <job name>-<execution unit id>-<date>-<time>.log.txt](#)
- [Application Configuration and Settings](#)
- [File Analysis](#)
- [Saving, Comparing, Merging and Execution Summary](#)
- [MA_My_Source_file_based-<date>-<time>.castlog](#)

CAST-MS-<date>-<time>.log.txt

Section of *CAST-MS Management Studio log file* dealing with the ReactJS analyzer in combination with the HTML5 analyzer. Get the location at [CAST Logs location](#).

This section provides the information of the type of analyzer being used based on the technology which is being analyzed in the application. It provides the details about the command line for running universal analyzer, connection profile and also provides the path of the Analysis Log for more details about the analysis of a single Analysis Unit.
