

TCC - Templates node

Templates node

The [Templates] node:

- allows you to define **custom** configuration as templates, which can be [Exported](#) for distribution and then re-used and applied to live Systems /Applications via an [Import](#)
- displays pre-defined sets created by CAST

Select the item you would like to know more about:

- [Entry points, Data Entities, End points, Excluded Items - Browser](#)
- [By naming, by inheritance, by type, free definition and Built-in parameters](#)
