PowerBuilder Analysis Unit editor - Source Settings tab

This section provides a detailed description of the specific **Source Settings tab** in the **PowerBuilder Analysis Unit editor**.

Source Settings tab

| | |
|---------------------|--|
| Project path | <p>The file based location of the corresponding project. This field is read-only.</p> <p> Notes</p> <ul style="list-style-type: none">When the field contains User defined, this indicates that the Analysis Unit has been defined manually instead of automatically following the use of the CAST Delivery Manager Tool. |
| Target | <p>Displays the path that contains the PowerBuilder Target (PBT) file.</p> <p>If this Analysis Unit is automatically defined, then this field will already be populated. You can choose a different source code location (use Browse) - usually only necessary when you are manually defining the Analysis Unit - or use the Reset button to re-populate the field with the default path (either the path defined when deploying the source code) or the path defined when the Analysis Unit was manually created).</p> |
