

# PeopleSoft 5.0

This is the documentation for the CAST AIP extension for **PeopleSoft**. It contains all documentation for major/minor and Service Pack releases.

"Official" CAST AIP Extensions are provided by CAST and are installed on top of CAST AIP to provide support for specific technologies (analysis /measurement/discovery) that are not supported "out-of-the-box" by CAST AIP. These "official" extensions have their own product life-cycle for development, testing and shipping, which is independent from CAST AIP. Please also see [Extensions - an introduction](#) for more information.

This document is intended to serve as a "Cookbook" for the PeopleSoft extension. The document is technically oriented and intended for an experienced CAST administrator. For the PeopleSoft administrator responsible for the source code extraction, a dedicated page is included in this document. Furthermore, this document is an extension of the standard CAST AIP documentation, available online at <http://doc.castsoftware.com>.
