

Delivery Manager Tool - Information - How to add java console debugging to diagnose JNLP and DMT issues while clicking on AICPortal

Purpose

This page will help you to add java console debugging to diagnose JNLP/DMT issues and enable more traces for debug issues.

Applicable in CAST Version

Release	Yes/No
8.0.x	✓
7.3.x	✓
7.2.x	✓
7.0.x	✗

Applicable RDBMS

RDBMS	Yes/No
Oracle Server	✓
Microsoft SQL Server	✓
CSS2	✓
CSS1	✗

Details

1. Just edit
C:\Users\\AppData\LocalLow\Sun\Java\Deployment\deployment.properties
2. Add these 3 lines at end of file :
deployment.trace=true
deployment.trace.level=all
deployment.console.startup.mode=SHOW
3. Try reproducing by clicking to jnlp shortcut and you will have a popup window which appears(Java Console) which will have the traces from the content.
4. This Java console window may not appear depending on settings in java control panel, so a better way to get latest trace file is to get the generated log file under:
C:\Users\\AppData\LocalLow\Sun\Java\Deployment\log\javawsxxxxxxxxxxxx.trace

Note: To restore previous situation, remove added lines.
