

# CMS - Assign Applications to Systems

## Assign Applications to Systems

The CAST Engineering Dashboard displays results in a hierarchical list of entities:

- Corporate > System > Application > Module

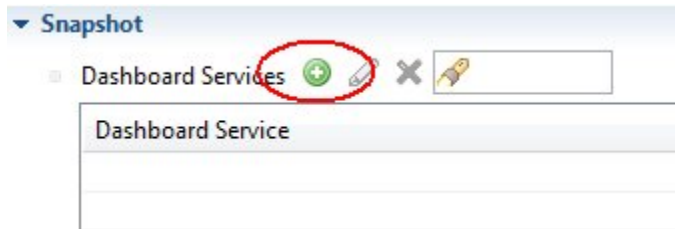

Index	05-01-2013
▲ My Corporate	
▲ My System	<input type="checkbox"/>
▲ MEUDON	<input type="checkbox"/> V1
MEUDON full content	<input type="checkbox"/> V1

If you are working with a [Dashboard Service](#) that was installed as part of a "combined" installation, then a default System will be created for you (My System) and all Applications that use the Dashboard Service will be assigned to that System.

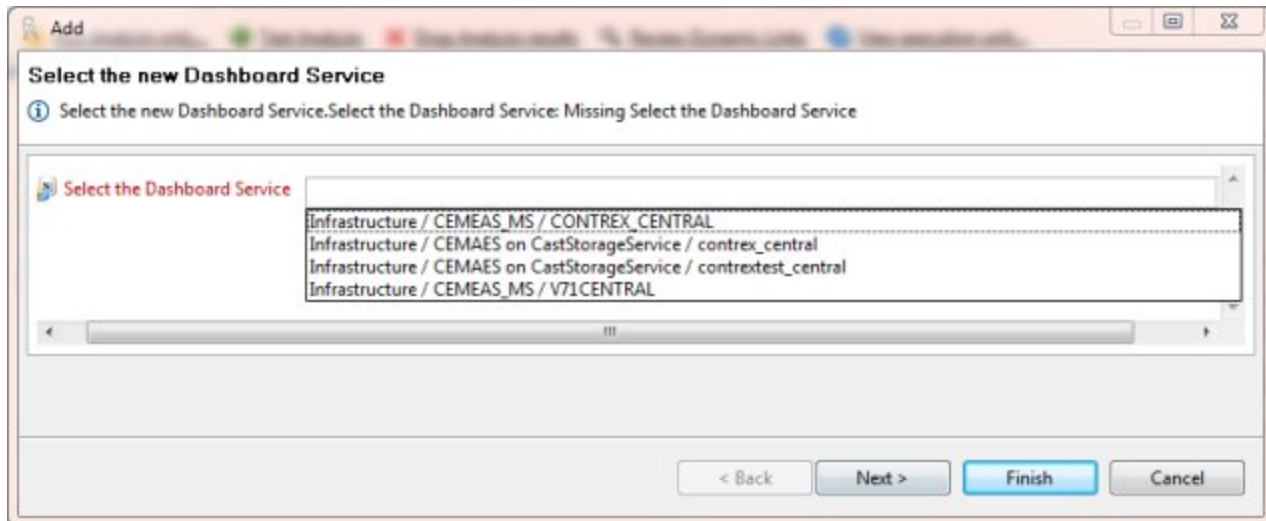

It is possible to **add additional System entities** to a Dashboard Service if you want, for example, Application A to belong to System 1 and Application B to belong to System 2. This is achieved in the [Dashboard Service editor](#) (**Portfolio tab**).

To assign an Application to a particular Dashboard Service, you need to:

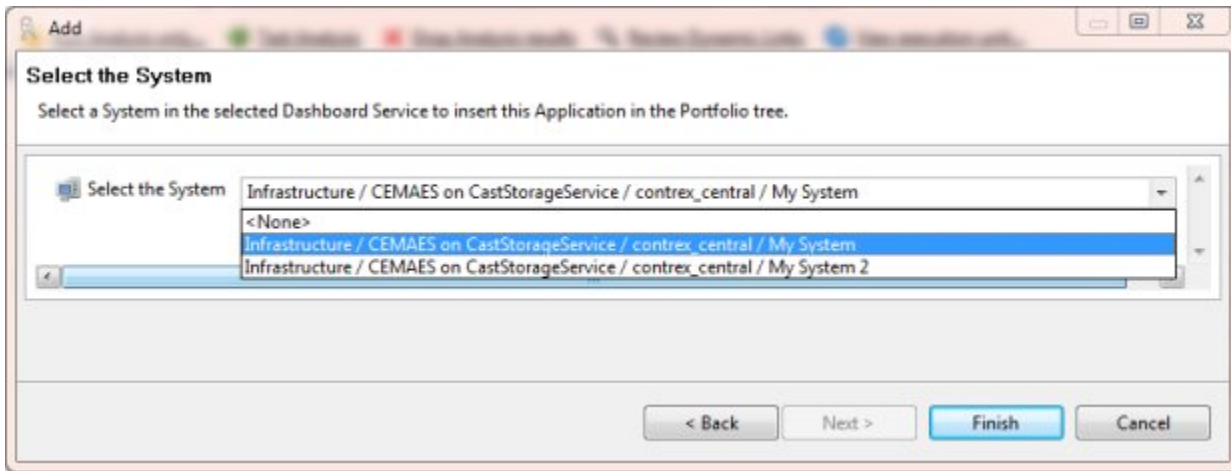

- Open the [Application editor](#) > **Execute tab**
- Click the  button in the Snapshot section:

- Choose the Dashboard Service on which the System you require is located - note that if your current Application is already associated to another System on the same Dashboard Service, the Dashboard Service will not be available for selection - you need to first remove the Dashboard Service from the Application (you can do this in the [Application editor](#) > **Execute tab**).

- Click **Next** (do not click **Finish** otherwise you will not have the option to choose the System - instead the Application will be assigned to the first System in the chosen Dashboard Service).
- Choose the **System** you want to assign the Application to:

- Click **Finish** to complete the process.
- You will now need to [generate a Snapshot](#) before any of these changes will be taken into account.
