ASP Analysis Unit editor - Source Settings tab

This section provides a detailed description of the specific **Source Settings tab** in the **ASP Analysis Unit editor**.

Source Settings tab

Project path	The file based location of the corresponding project. This field is read-only. Notes <ul style="list-style-type: none"> When the field contains User defined, this indicates that the Analysis Unit has been defined manually instead of automatically following the use of the CAST Delivery Manager Tool.
Application Root Path	Indicates the folder that is defined as the root folder for the Analysis Unit for analysis purposes. The Application Root Path is the path to the folder that contains WEB-INF directory. If this Analysis Unit is automatically defined, then this field will already be populated. You can choose a different source code location (use Browse) - or use the Reset button to re-populate the field with the information from the parent Application.

Web Server

Web Server File Extensions	This section displays a list of the file extensions that are included in the current file filter for your source code analysis. Only files that match these file extensions will be included in the analysis.
Also use Application Root Path for Web Server Files	If you select this option, the Application Root Path defined in the General tab will be used as a source for the web server files. If you wish to add additional source files use the option described below.
Files	Use this section to include or exclude specific source files for the Analysis Unit for analysis purposes - these are mainly to be used when you are manually creating your Analysis Unit but can also be used if you are modifying an automatically created Analysis Unit. <ul style="list-style-type: none"> Use the buttons to include or exclude specific Source Files (in the case of files, only files matching the choices made in Web Server File Extensions above will be considered) or Source Folders (folders are searched recursively). By default CAST will automatically suggest the Deployment Folder set in the Current Version tab (Application editor) for your Package when adding new source code folders or files. Use the button to remove an existing entry Use the button to edit an existing entry If this Analysis Unit is automatically defined use the button to reset the list to the entries defined by the CAST Delivery Manager Tool <p>If this Analysis Unit is automatically defined, then any auto defined entries will be read only.</p>

Web Client

Web Client File Extensions	This section displays a list of the file extensions that are included in the current file filter for your source code analysis. Only files that match these file extensions will be included in the analysis.
Also use Application Root Path for Web Client Files	If you select this option, the Application Root Path defined in the General tab will be used as a source for the web client files. If you wish to add additional source files use the option described below.

Files

Use this section to include or exclude specific source files for the Analysis Unit for analysis purposes.

- Use the     buttons to include or exclude specific **Source Files** (in the case of files, only files matching the choices made in **Web Server File Extensions** above will be considered) or **Source Folders** (folders are searched recursively).

By default CAST will automatically suggest the **Deployment Folder** set in the [Current Version tab \(Application editor\)](#) for your Package when adding new source code folders or files.

- Use the  button to remove an existing entry
- Use the  button to edit an existing entry
- If this Analysis Unit is automatically defined use the  button to reset the list to the entries defined by the CAST Delivery Manager Tool

If this Analysis Unit is automatically defined, then any auto defined entries will be read only.
