

CMS - Drop Analysis Results

Drop Analysis Results

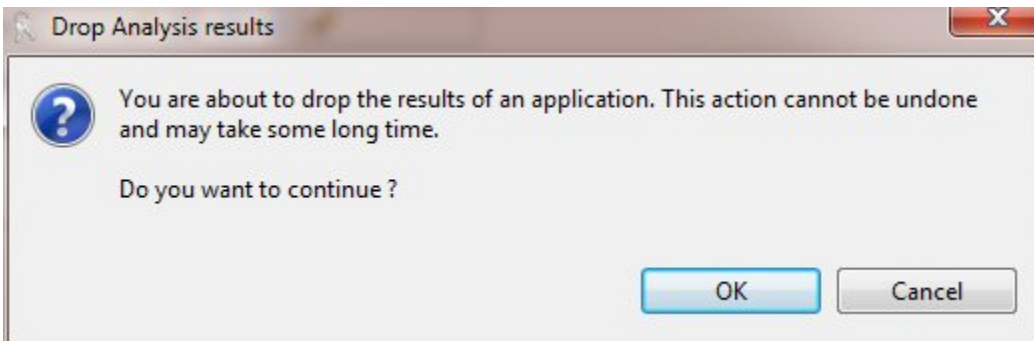

The Drop Analysis Results option enables you to clean up your Analysis Service of any analysis results associated with the current Application.

Using the option

- Open the **Application** whose Analysis Results you want to remove
- Select the [Execute tab](#)
- Click the **Drop Analysis Results** option:

- A warning dialog will be displayed:

- Click **OK** to proceed with the drop action.
- All objects related to analyses in the current Application will then be removed from the parent Analysis Service.

Notes - The action functions on an Application basis, therefore only objects related to the Application from which the option was launched will be removed from the Analysis Service.

- This action will not affect any existing snapshot results. These results are stored in the Dashboard/Measurement Service and are not impacted by this action.

- The result of the action will be visible in CAST Enlighten which interacts exclusively with the Analysis Service.

- The action will attempt to function even if the Analysis Service contains no results (i.e. you have not yet [run an analysis](#) or [generated a Snapshot](#) (including an analysis)).
