

2.2 - Snapshot Indicator storage changes

As mentioned in the [release notes](#), the storage location for Snapshot Indicator CSV reports has been changed from the AIP Node (in previous releases) to the shared common-data folder (`..\aip-node-data\common-data\snapshot-indicator`) - see [Application - Overview](#). Therefore if you have upgraded to 2.2 and you need to consult Snapshot Indicator reports generated with the previous release of AIP Console, you will need to **manually copy** the report files from the previous location to the new location. To do so:

Copy all files in the following location on all AIP Nodes:

```
%PROGRAMDATA%\CAST\AipConsole\AipNode\snapshot-indicator\
```

to the following shared folder location:

```
\\share\aip-node-data\common-data\snapshot-indicator\
```
