

Prerequisites for CAST Imaging

Learn about the prerequisites for deploying **CAST Imaging**. This includes understanding the various components and packages, how to size your required hardware, the prerequisites for an installation and how to get the installation media.

Deployment considerations for CAST Imaging

To deploy **CAST Imaging**, it is important to understand and consider the following:

- **Packages/components** available and required
 - Typical **architecture** scenario
 - Which **deployment architecture** should you use?
 - **Type of Applications** being onboarded
-

Hardware requirements for CAST Imaging

Understand the hardware that is required to deploy CAST AIP for Imaging:

- **On-premises** deployment
 - **Cloud** based deployment
-

Software requirements for CAST Imaging

What do you actually need to have in place before you can start the installation process?

- **CAST Imaging** instance requirements
 - **AIP Console** (front end) package requirements, including requirements for **end users** accessing AIP Console
 - **AIP Node** (back end) package requirements, including AIP Core analysis engine
 - **CAST Storage Service/PostgreSQL** requirements
 - Offline **CAST Extend** server (optional) requirements
-
