

# CMS Snapshot Analysis - Run Universal Analyzer - ASP and XHTML with HTML5 Javascript - Error Free Logs - CAST AIP 83

## Purpose

This page provides information on error free logs generated while running the analysis on an ASP application having XHTML files.

For ASP analysis using HTML5/JavaScript extension we need the following:

1. Download the [HTML5 and JavaScript](#) extension find the [page](#) which will provide more information.
2. Manage the extension in your triplet from server manager, refer the [page](#) for more information.
3. Run the analysis/snapshot.

## CAST-MS-[Date]-[Time].log.txt

CAST Management Studio log file details Universal Analyzer with HTML5/JavaScript extension. In this log you will get the information on Environment.

The log also provides the information on the type of analyzer being used based on the technology which is being analyzed in the application. It provides the details about the command line for running analyzer and other sub steps which gets executed while running the analysis and snapshot with the time taken by each step, status of each sub step and provides the path of the Log.
