

CMS - Validation/Verification/Search/Log

Validation/Verification/Search/Log

These views provide additional information about the CAST Management Studio when using it:

- **Validation view** > provides a validation service that will automatically check that the hierarchy, servers and services you are creating are valid. A message is appended in this view if a modification is found to be invalid.
- **Verification view** > provides results of the **Verify** option (see [Toolbar](#)) - similar to the Validation view
- **Search view** > displays **results of searches** carried out in the CAST Management Studio
- **Log view** > captures all the warnings and errors logged by the CAST Management Studio.

You can find out more information about these views in [CAST Management Studio - Views](#).
