

# AIP Console - Create Package

## Purpose

This page will help you solve problems related to operations with creating a package for an application in the CAST AIP Console.

CAST AIP Console is a front end web application which provides a means to configure, run, and manage CAST AIP analyses on multiple analysis machines.

CAST AIP Console gives an Application Overview showing the application state regarding versions, analysis and snapshots, Technologies and framework identification and Matching technology between Tech Survey and source code delivered

For more information, refer to:

- Official documentation: [CAST AIP Console](#)
- Specifically for version addition: [Add a new Version - deliver code - generate snapshot](#)
- As well as: [Advanced onboarding - add a new version and deliver source code](#)

## Applicable Platform

AIP Platform	Yes/No
CAST AIP 8.3	✓

AIP Console Version	Yes/No
AIP Console 1.8.x or greater	✓

## Action Plan

1. If you have a https maven repository configured and proxy setup on your server, you need to make sure to use the Manual Proxy settings in AIP Console as per the definition here - [Administration Center - Settings - Proxy](#)

From AIP Console 1.23.0 funcnel, the https maven package is designed to work on system proxy settings option as well.

1. Select the section you are interested in.
2. If the problem you are facing does not match any case listed in this page, report your problem to [CAST Technical Support](#) and provide the below [Relevant input](#) for CAST Technical Support to *reproduce the issue*.
