

# ENL - Viewing linked objects

## Viewing linked objects

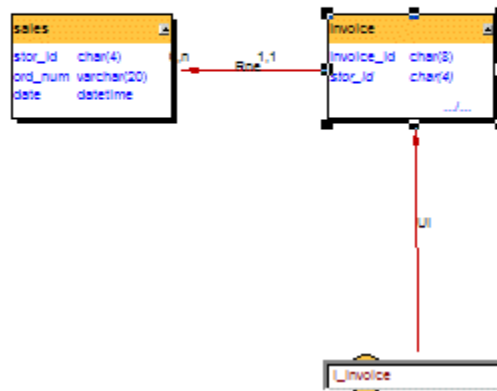

When you have a number of linked objects displayed in the [Graphical View](#), you can use a keyboard shortcut to view only those objects linked (whether calling or called) to a selected object :

1. [Place](#) the objects in the Graphical View.
2. Select the object you require.
3. Press and hold down the F9 key.
4. Objects not directly linked will be temporarily removed from the Graphical View.
5. Release the F9 key when finished.
6. Temporarily removed objects will be restored.

For example, here are two images of a hypothetical Graphical View:

In the next image, a selection was made on the "Invoice" table (the table has selection handles on it) and then the F9 was pressed:
