

CMS - Save All

Save All

The **Save All** option is used to update the **CAST Management Studio database** (the Management Service) following changes made in the CAST Management Studio.

If you create (for example) a new [Architecture Model](#), but do not use the **Save All** option prior to closing the CAST Management Studio, when you next [launch the CAST Management Studio](#), the newly created item will no longer exist.

Please consider this option as a way to record the current state of the Graphical User Interface.

You can invoke the **Save All** option as follows:

- Click **File > Save All**
- Use the  button located on the toolbar.

Notes

- Please do not confuse this option with the [Synchronize](#) option.
- Note that Applications are not subject to the same rules - you can create an Application and close the CAST Management Studio without choosing the Save All option and the Application will be available the next time you open the program.
