CMS - Filter rules - Metamodel based

Filter rules - Metamodel based

As described in Dynamic Link Manager filter rules, filters can refer to CAST metamodel types:

- **<callerType names="string"/>**
- **<calleeType names="string"/>**
- **<linkType names="string"/>**

You can specify one or multiple names as follows:

- Single type: **<calleeType names="MyType1"/>**
- Single type: **<calleeType names="MyType1|MyType2|MyType3"/>**

The type expected here corresponds to the metamodel type name, NOT its description.
