# Installing CAST AIP

⊘ This documentation page describes a legacy method of installing CAST AIP. This documentation is no longer maintained and may contain obsolete information. You should instead refer to **Installation and Configuration** with AIP Console.

A "greenfield" or "from scratch" installation is typically performed in the following order:

Install CAST AIP	Download CAST AIP Extensions	Install CAST AIP schemas	Initialize platform preferences	Deploy Web Applications
• Management Studio • Server Manager • [CAST Storage Service] • Enlighten	• Download any required CAST AIP Extensions	• Perform installation of CAST AIP schemas on CSS • Optionally install extensions	• Enter license key • Set delivery / deploy folders • Set LISA / LTSA / LOG folders	• AIC Portal • Health Dashboard • Engineering Dashboard • Legacy CED/Discovery Portal

The installation steps are detailed below:

Step	Description
Install CAST AIP from setup	Run the **CAST AIP setup.bat**. This corresponds to the installation of a CAST Administration workstation that will host all CAST components that you need to setup and/or run the CAST Application Plaftorm. ⓘ Note that CAST AIP is delivered in a ZIP file that needs to be unzipped to a folder on the CAST Administration workstation (it cannot be run from a network location). Once unzipped, the setup.exe file can be run to start the installation.
Download your CAST AIP Extensions	Before you can **install** a CAST AIP Extension with your CAST AIP schemas, you first need to **download** it. This is an optional step.
Install CAST AIP schemas	CAST Application Intelligence Platform relies on a set of schemas to store the data resulting from the source code analysis. These schemas are created during this step and you can follow different scenarios (deployment scenario). This step is executed from the CAST Administration workstation configured during the Install CAST AIP from setup step. You can optionally install your downloaded CAST AIP Extensions at the same time as you install the CAST AIP schemas.
Initialize the platform preferences in CAST Management Studio	Run the CAST Management Studio to: • Enter a license key • Configure the source code Delivery and Deployment folders • Optionally configure the LISA/LTSA/Log folders
Deploy the CAST web applications	Deploy the CAST web applications. This includes: • the **CAST AIC Portal** to manage the delivery and packaging of source code for analysis via the CAST Delivery Manager Tool (DMT) - mandatory. The source code Delivery folder also needs to be defined at this point. • the **Health Dashboard** for high level data consumption • the **Engineering Dashboard** for for detailed data investigation • the legacy **CAST Engineering Dashboard** and the **CAST Discovery Portal** for detailed data investigation (optional based on your license agreement)
