

# TCC - Entry Points, Data Entities, End points, Excluded Items - Right hand panel

## Entry Points, Data Entities, End points, Excluded Items - Right hand panel

The display in the main window for these nodes lists the number of sets that have been defined whether via [standard configuration files \(.TCCSetup\)](#) or specifically for the parent Application. The example below shows the **Entry Points** node:

| Entry Points    |                |
|-----------------|----------------|
| By naming       | empty          |
| By inheritance  | empty          |
| By type         | 28 definitions |
| Free definition | empty          |

See the following for more information about the child nodes.

- [By naming](#), [By inheritance](#), [By type nodes](#)
- [Free definition](#)
- [Built-in parameters node](#)
